KEY CAPABILITIES

Key Features

Everything FALYS watches, scores, and reports.

Real-Time Monitoring

Watches create, modify, delete, and move events, plus permission changes, as they happen.

Threat Detection

Flags suspicious activity using a five-stage rule-based and behavioral scoring engine.

Centralized Dashboard

One live view for logs, alerts, incident history, and agent status.

Cloud & On-Premise

Self-hosted deployment — run on your own servers or inside a cloud VM you control.

Compliance Ready

Detailed, exportable logs (CSV/JSON) support security and audit requirements.

Operational Efficiency

Admin-tunable rules reduce manual effort and speed up incident response.

THE ADVANTAGE

Benefits

Why enterprises choose FALYS for endpoint integrity.

Proactive Protection

Stay ahead of threats with continuous monitoring and explainable detection.

Data Integrity Assurance

SHA-256 hashing keeps critical files verifiably untampered and trustworthy.

Compliance Ready

Meet security and audit requirements with detailed logs and history.

Operational Efficiency

Reduce manual effort and respond faster to real security incidents.

Explainable Scoring

Every classification ships with contributing reasons and a confidence value.

DETECTION PIPELINE

System Architecture

From endpoint event to actionable alert.

SUPPORTED PLATFORMS

FLEXIBLE ROLLOUT

Deployment Options

FALYS is self-hosted — choose where your server runs.

-  **On-Premise**
Deploy within your own infrastructure with full control over data, network, and secrets.
-  **Your Cloud (VM)**
Run the FALYS server on a virtual machine inside your own AWS, Azure, or GCP account — still self-hosted, still under your control.
-  **Hybrid**
Mix on-premise and cloud-VM endpoints under one server for maximum deployment flexibility.
-  **Easy Installation**
Single compiled binary per platform — no Python required on any endpoint.
